

Biscom's Document Delivery Solutions

The means by which documents are delivered are many — fax, email, Web — but certain requirements never change: documents must be delivered quickly and reliably, and audit trails and archives must be maintained.

Biscom's document delivery solutions integrate into your existing document workflow, providing numerous options for delivering, storing, and tracking documents. Data capture, data processing, data storage, and data communication are all critical to a workflow process. We recognize the importance of this workflow, and provide solutions to make each step easier, more reliable, and more secure.

In addition to understanding the importance of your document delivery and business processes, Biscom also understands the importance of regulatory compliance. Regulations such as HIPAA and Sarbanes-Oxley make it absolutely necessary to not only manage your communications for confidentiality, but also to audit and archive your communications for regulatory compliance. Biscom's extensive logging and reporting features, and our document and communications archives, address these compliance and records management concerns.

Biscom's Document Delivery Suite Includes:

FAXCOM[®] Server

The FAXCOM Server enables users, applications, and business processes to send and receive faxes. The FAXCOM Server fax enables many specific computing environments, including Microsoft Windows and Exchange, Linux and UNIX, and IBM iSeries and Mainframes. FAXCOM is the fax engine for health care applications such as Centricity EMR by GE and Novius by Siemens Medical Solutions, and also integrates into mortgage processing, enterprise content management (ECM), and business process management (BPM) applications.

FAXCOM *Anywhere*[™]

FAXCOM *Anywhere* is for the organization that wants to utilize a fax server without incurring the costs of implementing and maintaining a fax server onsite. Users send and receive faxes via email from their desktop computer through a secure Internet connection to a virtual fax server at Biscom's hosted facility. As your fax needs grow, FAXCOM *Anywhere* provides a growth path to FAXCOM Server as a premise solution.

FAXCOM Image Indexing[™]

FAXCOM Image Indexing is a dynamic tool for viewing electronic document images, capturing the data from these images, and storing the image and corresponding captured data in a searchable database. FAXCOM Image Indexing is a convenient and effective tool for moving images through a workflow process, resolving not only data capture, but also recording every view and modification of each document image.

Biscom's Document Delivery Solutions

Biscom Delivery Server

Biscom Delivery Server (BDS) was built from the ground up to be a superior enterprise-class file delivery solution, one explicitly designed for today's more demanding file delivery needs. Available as a Web application, Outlook add-in, or desktop client, BDS enables secure, authenticated, point-to-point delivery of files, messages, and unstructured data. With its extensive reporting and auditing capabilities, BDS can help organizations create a more secure communications infrastructure. In addition, the Java, SMTP, and Web services APIs available with BDS enable an organization to integrate secure delivery services into their existing applications.
