

# SharePoint® Integration

## Secure File Transfer Solution

As businesses increasingly adopt Microsoft SharePoint for enterprise collaboration, enabling external parties access to confidential document libraries becomes an increasing security and compliance challenge. Biscom Secure File Transfer for SharePoint offers a simple, secure alternative for safely exchanging large and confidential files in your SharePoint repository with your clients and business partners.

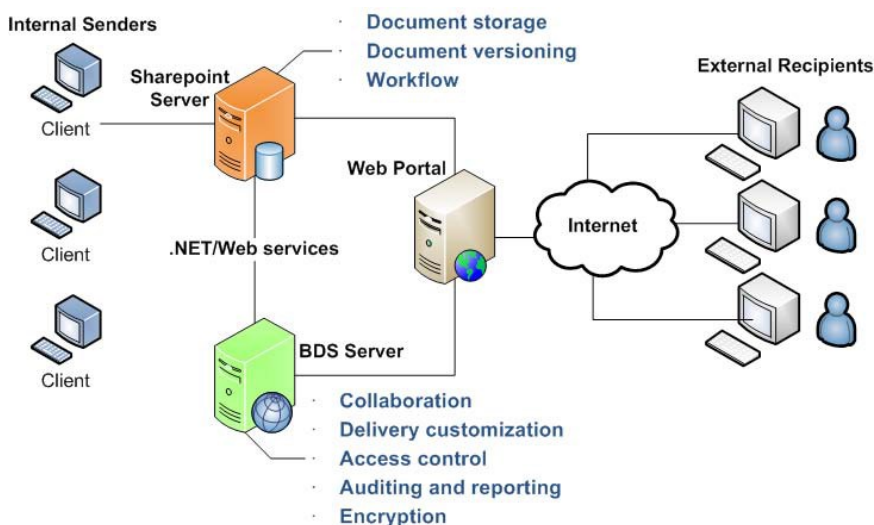

### The Next Generation of File Transfer

Biscom SFT is a superior, enterprise-class secure file transfer solution designed specifically for today's more demanding ad hoc file transfer needs. Available as a Web application or Outlook add-in, SFT enables secure, authenticated, point-to-point delivery of files and messages.

- As easy to use as email, the intuitive user interface will accelerate user adoption and discourage use of unsanctioned and cumbersome alternatives, such as FTP and peer-to-peer file sharing services.
- SFT encrypts data in transit and at rest, reducing the risk of security breaches from sending confidential data via email and FTP.
- The SFT Microsoft Outlook add-in offloads large files from the email server, resulting in improved email performance.
- External partners and clients will appreciate the simple process for exchanging files.

### Securely Deliver Documents and Files Directly from SharePoint

SFT for SharePoint integrates directly with the SharePoint user interface and menuing system to give users the option to Send Securely. BDS for SharePoint will place the files in a secure package, deliver a notification message to the recipients, and facilitate electronic delivery of the files after the recipients have been authenticated. The complete process is logged for regulatory compliance and auditing purposes.

### Biscom Secure File Transfer Features

- Files encrypted at rest and in transit
- Integrated with Microsoft Outlook
- Remote access from any Web browser; no special client software required
- LDAP and Active Directory integration for managing enterprise users
- Built-in auditing, logging, and reporting
- Email notification on viewing and download
- 100 GB+ file transfers
- Intuitive, brandable user interface
- Platform independent; runs on Windows, Linux, .NET
- Java, SMTP, and Web services APIs available
- Automatic restart on network failure
