- Authenticated users can access, view, and print received deliveries at the HP JetAdvantage MFP
- Printer driver supports direct delivery from EMR and Lab systems
- Secured by encryption and uses credential checking
- Delivery tracking and verification of receipt
- No file size limitations
- Transmit custom metadata with images for HL7 import into EMR systems.
- Applications for Windows, Apple, and Android

OVERVIEW

The exchange of high resolution documents such as diagnostic imaging and lab reports can be challenging for healthcare providers. Standard fax does not provide the necessary resolution while email and courier delivery is not secure. In addition, these methods do not provide electronic verification of receipt.

Biscom's Digital Fax enables secure sending and receiving of high resolution and color documents over the internet at high speeds without the need for color fax machines or phone lines. The Digital Fax App for HP JetAdvantage delivers scanned documents that require higher resolution than standard faxes. Inbound documents can be delivered directly to a JetAdvantage MFP for viewing and color printing.

BISCOM DIGITAL FAX DEPLOYMENT

Biscom hosts the infrastructure required to support Biscom Digital Fax in the cloud. Users connect using a web interface for transfer of digital documents and the Biscom Digital Fax app for transferring physical documents scanned at the HP JetAdvantage MFP.
